

The City of Springfield and Lane Transit District are working on Phase 2 of the Main-McVay Transit Study that includes the development and evaluation of transportation design options that improve safety and transit service on Main Street and McVay Highway.

The project's Governance Team met on Thursday, May 26, and provided further direction for the project along the **Main Street portion of the Corridor east of 21st Street** as follows:

- Remove the 116-foot Median Transit Lanes design configuration from further study
- Study both signalized and roundabout intersections
- Narrow design concepts to minimize and avoid impacts, within 96 feet or less
- Evaluate impacts of possible median locations
- Evaluate Enhanced Corridor as a design option

Project Next Steps

- Continue site visit meetings
- Conduct broader community outreach

- Complete further technical analysis
- Assess No-change and Enhanced Corridor along McVay Highway
- Hold design solutions meetings throughout the summer with businesses and property owners

Upcoming Project Milestones

- Continue Governance Team meetings
- Determine Main Street and South A Street alignment
- Present technical analysis and public feedback with recommendation of a preliminary locally preferred solution
- City Council meeting; public hearing
- City Council meeting; decision on locally preferred solution
